

Tradinco Instruments®

Profile

The Calibration Company

www.tradinco.com

Since its foundation in 1963, Tradinco Instruments designs, manufactures, distributes, repairs and calibrates high quality test and calibration equipment for industry and laboratories. Tradinco has also developed AutoCal® calibration software. The company is internationally recognized as **The Calibration Company**.

Each member of the Tradinco team is committed to the pursuit of quality and customer satisfaction for both products and service. Backed-up with ISO 9001-2000 and EN17025 certification, customers can be assured that Tradinco will manufacture and supply a high quality product on time.

Tradinco Products

Keeping our knowledge up to date with the latest technological innovations and translating this into the best solution for our customers, is a very important part of our business.

Tradinco supplies a wide range of portable and bench-mounted equipment for pressure, electrical and temperature applications. From single handheld indicators up to full automatic customized instruments. In order to offer our customers the best solution to their requirements and the ease of one-stop shopping, we represent all well reputed manufacturers on the market.

Workshop Systems

In addition to supplying test and calibration equipment for portable and bench-top use, Tradinco has developed a specialist capability in modular calibration systems. Custom-engineered, these workstations include both furniture and calibration equipment. Any workshop will directly benefit from these workstation solutions.

Efficiency will increase and cost will decrease when the required job can be performed in an ideal working environment. Tradinco systems are in service worldwide, ranging from the hostile environment of the offshore oil and gas industry in the North Sea to desalination plants in the Middle East, to breweries and power generation plants in the Far East.

AutoCal® is a powerful management tool for those responsible that devices are calibrated in line with today's quality guidelines, environmental standards, systems validation and safety guidelines. It is a software package, designed to make the management and execution of calibration and certification of measuring devices fast, simple and error free.

This unique software package has been developed 'by Calibrators for Calibrators'. Manual, semi- and full-automatic calibrations in combination with either Tradinco calibrators or third party calibrators, running multiple calibrations simultaneously will result in significant saving of time and costs. Managing the results, history trending and recalibration overviews it will offer customers a multi-function calibration and predictive maintenance tool, improving their overall calibration performance in many ways.

Training Courses

With more than 40 years experience, Tradinco offers its full skill know-how, allowing customers to improve their operations. The Tradinco Academy organizes custom-made training courses on theory and background on calibration, correct use of instruments, calibration management, dead-weight testers, pressure and safety, etc.

Comprehensive course books are provided and all successful attendants will receive a certificate. The training course can be held at our training centre or at your location.

Services & Support

Tradinco understands the need to provide pro-active responsive service facilities. The equipment and systems, due to their nature and possibly local and company regulations, will at sometime require recalibration maintenance and repair. Tradinco has extensive experience in the maintenance, repair and recalibration of all types of equipment, including third-party instruments, and offers customers Total Solution Service agreements. These services can be performed in our internationally accredited service centre.

Tradinco, in short, offers the market total system maintenance, installation, commissioning, training and refurbishment of systems, either at our service centre or at your location, wherever you are located.
