

## TRAQC 7 series

NEW TRAQC-7 PC process calibrator

"On the right TRAQC with the new unique pressure calibrator"

The Traqc-7 PC will make your job easier!

- All functionality in óne compact and robust instrument
- Pressure generation from 0 to 10 bar in 10 seconds
- Clear and large display with all required information

The Traqc-7 PC, a calibrator you can rely on!

- Developed by calibration engineers for calibration engineers
- Incorporating 50 years of know-how and experience
- Proven reputation

The Traqc-7 PC, easy and fast to use!

- Only 3 function keys and 4 navigation keys
- Ergonomic integrated handpump
- Straight forward and logic menu structure

The Traqc-7 PC, do precisely what you require!

- 0,02% FS

- Pressure measurement, generation,

signal measurement and loop calibration

- Vacuum and pressure up to 20 barg

Please contact Tradinco for further information on prices, delivery dates and other information.

Documentation

Brochure - Tradinco Quality Calibrator English

The Traqc-7PC is fully developed by Tradinco Instruments, in close co-operation with our customers. In this new standard for the industry, our knowledge, knowhow and nearly 50 years experience are combined. Our development engineers are, apart from being mechanical, electronic or software engineers, calibration specialists. They have been out there in the field and know what it is all about. Your instrument must be 100% reliable, the quality must be excellent, you even do not need to read the manual to use it and it must be rugged and robust. You want it to be there, capable of what it is intended to be used for, nothing less and nothing more!

the Traqc-7 PC benefits

High accuracy pressure measurement

Every required pressure range up to 20 barg

with an accuracy of 0.02%.

You can choose the most suitable range,

specifically for these critical measurements

or a wider range for the general tasks.

The choice is always there !

Vacuum and pressure with the integrated handpump

The ease of use having a combination of pressure measurement

and pressure generation in one instrument does not need any

further explanation. Current jobs are already very demanding

and complex. The Traqc-7 PC will make it easier.

You know that you have a complete instrument, ready for use!

Measurement and generation of Electrical signals

The Traqc-7 PC allows you to power your transmitters and

measure the common mA or V output signals precisely.

In addition to this, this instrument offers you the required functionality

for loop testing. An intelligent switch test function completes it all.

You only need to connect the Traqc-7 PC once

and you're ready to calibrate your transmitter

and loop in a fast and easy way

Data- and calibration procedures

Reduction of errors and a high reliability

of your measurement records, significantly

influences the quality and reliability of your job,

your product, your company and the perception of how your customers see your product and company.

The Traqc-7 PC contributes to this in every way.

The large memory allows you to store your calibration procedures and results.

At the end of the day you load your data into AutoCal®, Tradinco's powerful calibration management software, with only one mouse click.

All results are stored, errorless and organised.

Easy for reviewing, supportive to your (predictive) maintenance strategy and internal or external audits.

Straight forward operations

Use it without the need for a manual. One of the major goals when developing the

Traqc-7 PC was to have the logically structured menu. On the large and clear display,

you navigate and select the functionality and settings you require with only 3

function keys and 4 navigation keys. No question marks when using the Traqc-7 PC.

You will use the instrument with great confidence.
